

# Investigational therapy for patients with malignant pleural effusion from **Breast & Ovarian Cancer**

**MITOPE**  
CLINICAL TRIAL

For healthcare professionals

## Seeking Patients

Patients with MPE associated with either breast or ovarian cancer. Must have progressed on at least 1 prior line of systemic therapy and have no contraindications to paclitaxel.

## RSO-021 Localized Therapy

- Allows for direct contact between the drug therapy and the metastatic tumour(s) of the pleura.
- Results in an increased concentration of drug in the local environment
- Therapy is delivered through an intrapleural catheter (IPC)

## About The Study

We're seeking participants to join an open-label, Phase II Expansion Study (MITOPE), aimed at assessing the efficacy and safety of a novel investigational anticancer agent – RSO-021 – in patients with advanced cancer and few remaining treatment options.
